

Whopper Tomato

**Big,
juicy,
crack-
re-
sistant
toma-
toes
finish**

**sooner, even in cloudy weather!
Higher yields over a longer sea-
son!**

- ***Lycopersicum 'Whopper'* Intermediate type**
- **Use:** The original Whopper was an American classic, and its successor is simply the home gardener's dream tomato: greater disease resistance, higher yields, a longer season, and better taste! Then they keep right on coming in huge quantities until frost -- none of your smaller, greener end-of-season fruits here! And because they're meatier, you get even more succulent tomato flavor in every slice! Resistant to Verticillium Wilt, Root Knot Nematodes, Tobacco Mosaic Virus, and 2 strains of Fusarium Wilt.
- **Exposure/Soil:** FULL SUN! Soak to depth of 6 to 10 inches when watering. They need at least 6 hours of direct sunlight a day. Tomatoes hate red clay so use a good soil such as our peat blend.
- **Growth:** Grows 36" tall and 36" wide. Plant tomatoes 2"-3" deeper than current soil line for a sturdy plant. Fruits 65 days from setting out transplants.
- **Hardiness:** Zone 9-11, Annual, houseplant.
- **Foliage:** Small, lacy leaves.
- **Fruit:** These big, juicy, crack-resistant tomatoes, 4 inches or more across, ripen uniformly (even when the weather is overcast!)

Did you know that we recycle empty pots and trays? Please bring them back! Save the Earth!
