

Tifblue Rabbiteye Blueberry Bush

Early Season	Mid-Season	Late Season
Austin / Alapaha	Bluebelle	Baldwin
Becki Blue/	Brightwell	Centurion
Climax / Premier	Chaucer	Choice
Vernon/ Titan	Powderblue	Delite
Woodard	Tifblue	Ochlockonee

Vaccinium ashei 'Tifblue'

- **Use:** Berry Plants are large, very firm, highly flavored, and hold well on the bush . Pollinates best with Climax and Brightwell.
- **Exposure/Soil:** Prefers light, acid soils (pH 4.5-5.2) with high organic matter (20-50%) are preferred, unlike most fruit crops.
- **Growth:** Moderate, 4-10' tall and wide; best if pruned.
- **Hardiness:** Zone 6-9; shrub
- **Pollination:** **Plant more than one variety for cross-pollination to promote adequate fruit set. Also, choosing varieties from the different ripening categories provides a broad harvest season.**
- **Foliage:** Deciduous. Bluish-green foliage.
- **Flower:** Blooms in mid to late March in Southern Mississippi and ripens from late June through July. Fruit size is small to medium with good color, picking scar, firmness and flavor. Berries are very tart until fully ripe, and tend to cling to the plant until fully ripe, facilitating both hand and mechanical harvesting. **More info from UGA on our website on the PLANT INFORMATION PAGE.**
