

Honey Rose Premium Coral Bells

Heucherella 'Honey Rose'

- **Use:** Ever-evolving foliage colors from warm coral-rose in spring to honey, sable-colored in summer. Dark veining creates intricate patterns. Each leaf is frosted with subtle silver highlights. Frothy white flowers sit just above foliage in summer. Compact, tidy habit and vigorous growth. A cross of Heuchera and Tiarella. Forms an expanding mound flowering in late spring into summer with strong leaf colors and great flowers. Versatile!
- **Exposure/Soil:** Part sun-shade. Best when planted under other trees, but not too deep a shade or poor flowering and leaf color. Moist, well-drained soil, but not soggy. Use slow release fertilizer two times a year. Water regularly, when top 3 in. of soil is dry.
- **Growth:** Fast growth to 8" tall, 15" in bloom overall, by 15" wide.
- **Hardiness:** Zone 5-8; Perennial
- **Foliage:** Semi-evergreen. Sable colored, deeply incised and lobed foliage is highlighted with dark veins that form an intricate pattern. Young leaves are a warm coral-rose with dark veins as well. Each leaf casually turns a lobe or two adding dimension and interest to this most charming plant.
- **Flower:** Spikes of white flowers on dark stems.

Because of their low, mounding habit, they are often used as edging along paths or in containers. Try cutting a few of the tall flower scapes for fresh bouquets. Mix with Ghost fern for a great contrast in the garden.
