

White Spotted Deadnettle

Use as a groundcover for cover shady banks. Also excellent used in containers.

Lamium maculatum 'White Nancy'

- **Use:** Lamiums are a perfect deer resistant groundcover to brighten a partly sunny, semi-shady spot. A great performer. Attractive foliage.
- **Exposure/Soil:** Prefers part sun to shade! Use slow release or water soluble fertilizer in late spring. Prefers to be kept moist and likes rich soil. Water under leaves and flowers for best results.
- **Growth:** This compact type grows 6" tall and plant 16" apart.
- **Hardiness:** Zone 4-8 Perennial.
- **Foliage:** Semi-evergreen; 1- to 2-inch-wide leaves are silvery white with green edges and have a quilted appearance. Vigorous grower but non invasive. Shear back to 4" to 6" if it gets leggy or cut back to new leaves at base of plant in midsummer. Can be divided as needed in spring or fall.
- **Flower:** White Nancy produces milky white clusters of small, hooded flowers in late spring and sporadically thru the summer. Stunning silvery leaves with narrow green margins make this an eye-catching groundcover even when not in bloom. A breath-taking display in an all-white garden.
