

'Wonderland Mix' Iceland Poppies

Papaver nudicale 'Wonderland Mix'

- **Use:** This is a naturalizing annual. Which means they will bloom, set seeds, they'll germinate, and every fall and each spring you will have gorgeous poppies in your garden! Long-lasting and with strong stems, they are splendid in the border but are also excellent in containers. Icelandic poppies have a longer bloom period than the Orientals. Good for cutting if stems are picked just as the buds begin to open. Removing faded flowers will encourage more buds to form. Allow plants to set seed.
- **Exposure/Soil:** Prefers full sun and sandy soils. Water regularly, when top 3 in. of soil is dry to start. Little water needed once established. Prefers a higher pH soil. Must add lime to raise pH to 7.
- **Growth:** Fast growing, 12 to 18 in. tall and 12 to 24 in. wide.
- **Hardiness:** Zone 2-8, reseeding Annual; Save some seeds and spread them where you please.
- **Foliage:** Deciduous. Lobed leaves. Goes dormant in summer heat.
- **Flower:** A mix of yellow, white, red, melon, and crimson blooms on short stems May through July.

**Poppies like the cool weather!
They will bloom in the fall and
the biggest show is in early
spring!
Deer resistant!**
