

Angelina Stonecrop

Sedum rupestre 'Angelina'

- **Use:** A terrific low evergreen groundcover for sunny areas with poor dry soil. When planted in containers or on a wall this develops a beautiful cascading habit. Plants may be pruned back at any time if they get too large. Foliage sometimes develops beautiful amber tones in the autumn and winter. Does well in large rock gardens where the plants can be given room to spread. Best with occasional to no foot traffic. Drought tolerant.
- **Exposure/Soil:** Plant in full sun, but will tolerate some shade. Prefers well-drained soil, but it will tolerate most soil types and is drought resistant.
- **Growth:** Grows 3" tall and continues to spread.
- **Hardiness:** Zone 3-8; Perennial
- **Foliage:** Deciduous. This forms a trailing mat of succulent golden-yellow leaves.
- **Flower:** Clusters of yellow starry flowers appear during the summer.

Drought tolerant and so easy to grow! Very good at controlling weeds also.
