

Blue Plum Peach Tree

**Heirloom clingstone
variety
Ripens in late August
to early September
600 chill hours required**

***Prunus insititia* 'Blue Damson'**

- **Use:** Vigorous heirloom variety produces heavy crops of gorgeous, very dark purple fruits with juicy, yellow flesh and a pleasing spicy-tart flavor. Small to medium plums have firm flesh, making them good for canning, fresh eating and desserts. The clingstone fruits ripen from late August to early September. While a self-pollinating variety, the Blue Damson Plum Trees will produce higher yields if more than one tree is planted.
- **Exposure/Soil:** Full to part sun. Soil should be well-drained. Acidic soil is preferred, though it can tolerate a wide variety of soils. They are not drought-tolerant, so proper watering is a must.
- **Growth:** Grows to 12-15' high and wide; shrubby
- **Hardiness:** Zone 5-8; Tree
- **Foliage:** Deciduous. Dark green leaves.
- **Flower:** Bears simple, small white flowers in early spring followed by ovoid-shaped, dark indigo blue-skinned fruits with clingstone flesh; trees are self-fruitful and do not require cross-pollination
