

# White Euphorbia

**Looks great with  
blue Victorian  
Sage or petunias  
in mixed planters**

## *Euphorbia 'Diamond Frost'*

- **Use:** Diamond Frost might look delicate and frilly, but nothing could be further from the truth. Diamond Frost is actually pretty much tough as nails. She has performed well from North to South and coast to coast. As you might suspect she is great in mixed containers and containers by herself, but don't discount her excellent performance when planted in the landscape. She needs little to no supplemental water and is extremely heat tolerant. She doesn't need to be deadheaded and shouldn't need much in the way of fertilizer either - she's a very self-sufficient gal. While you shouldn't need to trim her back, you can trim her back at anytime and she will just keep doing her thing.
- **Exposure/Soil:** Plant in full sun, but will tolerate some shade. In our area they must have well-drained sandy soil to thrive in our wet winters. They are very drought tolerant. Requires a dry location with good drainage, especially in areas of high rainfall.
- **Growth:** Grows 12-18" tall and 12-18" wide.
- **Hardiness:** Zone 9-11; Annual; May have luck with it returning with a good mulching
- **Foliage:** Deciduous. Glaucous blue leaves.
- **Flower:** Bright white 'clouds' of flowers are a perfect compliment to any planting all the way until frost!
