

Snow White Lobelia

Lobelia sunbelia 'Hot Snow White'

- **Use:** Breakthrough breeding in the class, the Hot series offers gardeners the most dependable series of lobelia with unsurpassed quality, superior garden performance and consumer appeal—even through the heat of summer. In fact, trial after trial, no other series comes close to the heat performance of Hot lobelia. These reliable plants perform beautifully in baskets and mixed containers, but also make stunning landscape displays.
- **Exposure/Soil:** Sun-part shade. Water regularly, when top 3 in. of soil is dry. Use slow release fertilizer for best results. These newer types of Lobelia are much more heat tolerant than past plants. They will reliably bloom in warm temperatures unless night temperatures stay in the upper 70's or above. If you experience an extended time period with high night temperatures the plants may flush out of bloom, however, the plants themselves should continue to look good. If the plants do go out of flower using a sharp pair of scissors or pruning shears to give the plants a "haircut" - a slight overall trim - should encourage additional branching. Additional branching will result in increased flower power once the plants begin blooming again after night temperatures fall.
- **Growth:** Grows 8-15" and 12-24" wide.
- **Hardiness:** Zone 9-11, Annual, Houseplant
- **Foliage:** Delicate, but vibrant green foliage.
- **Flower:** A multitude of blossoms from spring to fall make this one of the landscape plants for high impact color! We love the pure white flowers!

Plants are very floriferous and hold their mounded shape.
