

Colorblaze Nearly Noir Coleus

They will KNOCK your socks off! Fabulous for pots, hanging baskets, and window boxes with its modest size. Cutting grown. By Proven winners.

Solenostemon/Plectranthus scutellarioides 'Colorblaze Nearly Noir'

- **Use:** We tend to focus on flowers in our gardens, but plants with colorful foliage are great additions to gardens. Foliage is a constant presence and a great way to add consistent color to gardens. Newly Noir has deep purple to black foliage and is a wonderful plant for both sunny and shady spots. It grows up to three and a half feet tall, perfect for the middle to back of the bed and it makes a great thriller in combination recipes. I also love planting coleus in mono-crop pots.
- **Exposure/Soil:** Sun– shade (less color on leaves in shade), very easy to please. Provide well-drained, moist soil, but not soggy. Use a slow release fertilizer. Superb in borders, beds, and open woodland gardens.
- **Growth:** Grows quickly 24-40" tall or more and about 18-24" wide
- **Hardiness:** Zone 9-10, Annual or Houseplant, some people have luck with them coming back in sheltered locations with good drainage, but that depends on the winter.
- **Foliage:** Features deep purple, near-black foliage with a heavy texture and serrated edges.
- **Flower:** If flowers start to form or if your plant is getting taller than desired, we recommend pinching it back to your desired height. The plant will in turn produce more foliage for a fuller looking plant.
