

# Amazing Cauliflower

## *Brassica oleracea* 'Amazing'

**These top quality hybrid plants grow quickly, producing strong outer wrapper leaves that protect both the quality and color of the developing cauliflowers for harvestable heads extra early in the season.**

- **Use:** The name says it all! Amazing is the classic cauliflower with the hearty flavor and dense, crisp texture that gardeners and gourmets love. Big, vigorous, uniform plants produce brilliant white, deeply domed heads. Ample wrapping leaves provide shielding from sun and cold, so gardeners north and south can grow this American favorite!
- **Exposure/Soil:** Plant in full sun. Prefers moist, but not wet soils. Transplant into soil rich in humus or compost that has been adjusted to a pH of 6.5-7.
- **Growth:** Space plants 6-8" inches apart in the row, and space rows three feet apart. The heads average 4-6" across. 68 days from setting out transplants in the garden.
- **Hardiness:** A cool-weather crop, it can be grown in spring and fall everywhere, and even in winter in mild-weather areas. We recommend using a frost cloth to protect from hard freezes.
- **Foliage:** Not typically eaten.
- **Flower:** The heads are delicious whether cut up raw in salads, quickly steamed, or tossed with olive oil and roasted to nutty perfection.
