

Flash Collards

An excellent cutting green with a mild, sweet flavor especially if exposed to a little frost. High in iron, calcium, potassium, phosphorus, and vitamins A, B, C, and E. Rapid regrowth after harvest.

Brassica oleracea 'Flash'

- **Use:** Vates-type hybrid. Collards are wonderfully tolerant of both heat and cold; in fact, their flavor is sweetened by a little frost.
- **Exposure/Soil:** Full to part sun. Prefer a fertile, well-drained soil high in organic matter with a pH range of 6.0–7.5. Consistent moisture will produce the best quality leaves. Must amend red clay for best crop.
- **Growth:** Plants reach 16-23 inches tall. 80 days.
- **Hardiness:** Vegetable; Can be planted in spring or fall.
- **Foliage:** Very slow to bolt. Flash offers repeated harvests of dark green, smooth leaves. Very high yielding.
- **Flower:** Not known for flowers.
