

# Georgia Collards

**Save money  
by growing  
your own  
vegetables!**

## ***Brassica oleracea* 'Georgia Collards'**

- **Use:** Quick-to-finish, non-heading plants produce plenty of succulent greens! A beloved favorite for many years, Georgia is tops for tender, moist bite and reliably heavy yields. Collards are wonderfully tolerant of both heat and cold; in fact, their flavor is sweetened by a little frost.
- **Exposure/Soil:** Full to part sun. They must have well-drained soils, so if you have red clay you must amend it. Water regularly, when top 3 in. of soil is dry.
- **Growth:** Plants reach 30 to 36 inches tall. 80 days.
- **Hardiness:** Vegetable; Can be planted in spring or fall.
- **Foliage:** The non-heading plants reach 30 to 36 inches tall, producing abundantly, and the greens are unsurpassed for fresh-collard taste.
- **Flower:** Not known for flowers.
