

# Burpless Cucumber

This hybrid produces heavy yields of 4-5 pound melons. Better disease resistance than other early cantaloupe.

## *Cucumis melo var flexuosus*

- **Use:** Hybrid Cucumber. This is the highest yielding burpless cucumber we've found yet. The attractive, 10" cukes impart a refreshing, mild taste. Plants are extra-productive because of their huge numbers of female flowers. Disease-resistant.
- **Exposure/Soil:** Full sun or at least 5-6 hours of afternoon sun. Water regularly, when top 3 in. of soil is dry.
- **Growth:** Plant every 18" in rows 6' apart.
- **Hardiness:** 9-11, annual,
- **Fruit/Flower:** Each variety is a little different and must be learned! Most melon varieties are ready when the gray-green color begins to change to buff-yellow and when a light tug separates the fruit from the vine. STORAGE: Store ripe netted melons at near freezing; store other melons at 45-50°F (7-10° C) and 80% humidity 2-4 weeks.
