

Simply Salad City Lettuce

Lactuca sativa 'Simply Salad City'

- **Use:** Lettuce is an easy crop to grow as it does not require too much water or attention, however it does prefer a little shade through the heat of the summer and therefore makes a great companion to taller veggie varieties. Simply Salad City Garden Mix was bred to produce a mix of red and green leaf lettuces that can be harvested multiple times at approximately 3 week intervals as it has only a 20 day maturity time. To do this, cut back the whole crop to 2 inches above the soil line.
- **Exposure/Soil:** Full to part sun and keep the soil evenly moist.
- **Growth:** Grows 6-12" tall and wide and larger. Less than 45 days to maturity.
- **Hardiness/Harvest Time:** Begin harvesting outer leaves as soon as they are large enough and continue until a central stalk begins to form, which signals the end of the harvest period. You can also harvest the entire plant when it's mature but still young and crisp.
- **Leaf:** Traditional mix of red and green lettuces. Easy on the palate. 14-21 days.

Vegetable gardens don't have to be boring. Plant violas and pansies in-between your vegetables!
