

# Better Bush Tomato

If you're looking for an old-fashioned-flavored tomato with the juiciness and distinctive "tang" you remember from vine-fresh tomatoes of the past, Better Bush Improved Hybrid is the best choice.

- ***Lycopersicum* 'Better Bush'** Indeterminate type
- **Use**: 68 days from setting out transplants. ISI (indeterminate short-internodes). These big, luscious, 4-inch fruits grow very densely on indeterminate 4-foot plants, thanks to shorter internodes. The central stem rarely needs staking (except during those "bumper crop" times!), and this plant begins early in the season and just keeps going! This is a superbly garden-worthy variety with great yields of ultra-satisfying fruits. Resistant to Verticillium Wilt and Fusarium Wilt Race 1.
- **Exposure/Soil**: FULL SUN! Soak to depth of 6 to 10 inches when watering. They need at least 6 hours of direct sunlight a day. Tomatoes hate red clay so use a good soil such as our PRO\_MIX. 80 days.
- **Growth**: Average plant height is about 50 inches.
- **Hardiness**: 9-11, annual, houseplant.
- **Foliage**: Dark green quilted leaves.
- **Fruit**: Walloping 4-inch fruits have a lusciously juicy consistency and great garden-fresh flavor!
