

Celebrity Plus Tomato

It has a high resistance to fusarium wilt Fol:1,2; gray leaf spot Sbl,Sl,Ss; tomato mosaic virus ToMV:0-2; and verticillium wilt Va:1/Vd:1. It has intermediate resistance to tomato spotted wilt TSWV:0 and root-knot Ma,Mi,Mj. Self-pollinating, the plant will bear fruit without any pollen from other varieties.

Lycopersicum 'Celebrity' (Indeterminate type)

- **Use:** An improvement on the original Celebrity (an AAS Winner), Celebrity Plus, a hybrid F1 tomato, is grown as a fruit vegetable. The plant sets small "perfect" flowers followed by smooth, red tomatoes. Tomatoes are considered a superfood for their nutrient rich content, having a high (top 20) Aggregate Nutrient Density Index score (ANDI), or micronutrient-per-calorie density. Tomatoes are a good source of vitamin C and provide vitamin A and potassium. They also contain carotenoid lycopene and beta-carotene as well as phenolic acids and flavonoids.
- **Exposure/Soil:** FULL SUN! Soak to depth of 6 to 10 inches when watering. They need at least 6 hours of direct sunlight a day. Tomatoes hate red clay so use a good soil such as our peat mix.
- **Growth:** This plant has a weeping habit, so it dangles about 2 feet over the sides of containers, for all the world as pretty as any spreading Petunia!
- **Hardiness:** Zone 9-11, Annual, houseplant.
- **Foliage:** Dark green quilted leaves.
- **Fruit:** The fruits are larger than the original Celebrity, weighing in at 7 to 8 ounces. They have better uniformity and a higher brix value (5.4), meaning they have the same outstanding flavor as Celebrity, but sweeter.
