

Sunshine Blue Blueberry Bush

Vaccinium x 'Sunshine Blue' (Southern Highbush)

- **Use:** One of the best for mild-winter areas, a low-chill selection perfect for small gardens or large patio tubs. Blue-green foliage and showy pink to white flowers provide ornamental value, followed by an abundant crop of fruit. Self-fruiting, but yields best when planted with another variety. Recommended winter chill: 150 hours
- **Exposure/Soil:** Prefers light, acid soils (pH 4.5-5.2) with high organic matter (20-50%) are preferred, unlike most fruit crops.
- **Growth:** Moderate, 4-10' tall and wide; best if pruned.
- **Hardiness:** Zone 5-10; Shrub
- **Pollination:** **Best when you have more than 1 in your yard although they are self-fruitful.**
- **Foliage:** Deciduous. Bluish-green foliage.
- **Flower:** Berries are blue-black color; good fruit quality. Fruit mature in about 90 days from bloom. ***More info from UGA on our website on the PLANT INFORMATION PAGE.***
