Vitis 'Himrod Seedless'

- **Use:** A vigorous deciduous vine with bold-textured, deep green foliage. Grown for its clusters of small, entirely seedless, crispy sweet, early season fruit that turns golden yellow when fully ripe in the summer. Works well for use as an ornamental vine on an arbor or trellis or trailing along fences. Excellent for fresh eating as a sweet dessert grape.
- **Exposure/Soil:** This grape tolerates a wide range of soil conditions, but must have good drainage. Prefers warm Southern sun exposure for best crop. Needs full sunlight and high temperatures to ripen, so plant on southern slopes, the south side of windbreaks, or the south sides of buildings.
- **Growth:** Fast growing vine; grows 20 to 25 ft. each year.
- **Hardiness:** Zone 5-8; Vine
- **Foliage:** Deciduous. Dark green above and green tinged yellow beneath, the leaves are glossy on both sides, becoming firm and subglabrous at maturity.
- **Flower/Fruit:** The hardiest and finest quality of the white grapes. Himrod's flavor is excellent with sweet, juicy fruit that dries well for sweet raisins. First to ripen – a month ahead of Concord. Disease resistant. The vine is vigorous, bearing large loose clusters that ripen early and keep well. A delicious grape, one of the finest of the seedless varieties. The clusters are large but rather loose; berries are medium size, oval, golden amber and sweet.
