

Bamboo Parlor Palm

This plant filters pollutants from the air while releasing oxygen. With this plant in your home, you breathe cleaner air.

This plant is considered non-toxic, therefore safe around children and pets.

Chamaedorea seifrizii

- **Use:** Reed palm (also called cane bamboo) features graceful stalks topped with beautiful dark green, feathery leaves. This palm is as adaptable as it is gorgeous; bamboo palms can thrive in almost any room in the house. Our bamboo palms are raised in low light conditions so that when they are placed in your home, they adapt instantly. This palm is planted in a white self-watering Lechuza planter (with attractive smooth black stones as a mulch) -- a combo that combines high-style with easy-care practicality.
- **Exposure/Soil:** Bright indirect light preferred but tolerates medium to medium low light. Need moist, but not soggy, soil. When the soil is slightly damp, the palm will need a thorough watering. Never leave the palm in standing water (in the pot or saucer) or it will rot. Apply a well-balanced fertilizer when the soil is wet from a thorough watering so the roots don't burn. We recommend our **potting mix and slow release fertilizer**.
- **Growth:** Slow to moderate growth rate of 8-10' tall and 4' wide.
- **Hardiness: Zone** 10-11; Houseplant; Tropical, Bring indoors when temps are below 55 degrees..
- **Foliage:** Clustering with crowns of 5-8 feather leaves that are 2-3' long with age. Care tip: When leaves turn yellow or brown, clip them off with sharp pruning shears.
- **Flowers:** Bright orange inflorescence.
