

Carnivorous Hanging Pear Terrarium

Dionaea muscipula / *Nepenthes alata* / *Saracenia*

- **Use:** Wild, fascinating, and wonderfully weird, the Little Pot of Horrors Carnivorous Plant Collection brings together some of nature's most notorious predators in one irresistible package. These living bug catchers are as entertaining as they are unusual, making them a favorite for curious plant lovers, kids, collectors, and anyone who likes their houseplants with a little bite.
- **Exposure/Soil:** Keep planting mix very moist at all times; **Using distilled water is best, no tap water.** Place in bright indirect sunlight indoors. Performs well at an average indoor temperature. To fertilize it, just feed it insects! If When watering them, soak the soil and then allow it to get moderately dry before doing so again. **Best to keep soil moist at all times.**
- **Growth:** Grows 12" tall and 8-10" wide, larger over long periods of time.
- **Hardiness:** Zone 9-11, Annual, houseplant It prefers warmer places, though it can tolerate temperatures down to the low 40s F. Some humidity is also important, though less so than other carnivorous plants.
- **Foliage:** Remove old leaves and traps as they turn black. Keep plants at (35° -50°F) from Nov-Feb when dormant. Venus Flytraps and some pitcher plants require a seasonal winter dormancy. Nepenthes don't have winter dormancy typically.
- **Flower:** In spring new leaves and flowers will appear. Remove flower for stronger, larger traps. If transplanting, use peat moss.

This plant is considered non-toxic, therefore safe around children and pets.

Attracts small insects with sweet smelling nectar, then digests the meal!
