

Flow Gasteria

Gasteria 'Flow'

- **Use:** A rosette forming succulent with upright, triangle pointed leaves that are decorated in small white bumps. Gasteria is an easy to care for indoor plant or structured succulent perfect for mixed plantings. Gasteria also stores water in its thick leaves, which enable it to withstand long droughts. Its growth season is in the winter months, when it is dark, cold and rainy. At that time the plant starts growing, while in the summer the plant is at rest.
- **Exposure/Soil:** Full sun. Water every 10 days to weeks allowing soil to dry out in between waterings. Use slow release fertilizer for best results. **DO NOT OVERWATER!** Low humidity is not a problem for these plants. The only issue you might have is in highly humid environments, which, if combined with overwatering, can be a trigger for fungal infections and eventually root rot.
- **Growth:** Grows 12" tall and 8-10" wide, larger over long periods of time.
- **Hardiness:** Zone 9-11, Annual, houseplant
- **Foliage:** Thick fleshy leaves are tongue shaped and covered in small white dots that often give them a rough reptile texture.
- **Flower:** Well cared for plants might produce flowers in late winter-early Spring

This plant is considered non-toxic, therefore safe around children and pets.
