

# Crimson Pink Calathea

This plant filters pollutants from the air while releasing oxygen. With this plant in your home, you breathe cleaner air.

This plant is considered non-toxic, therefore safe around children and pets.

## *Goeppertia picturata* 'Crimson'

- **Use:** There are two sides to every story -- or in this case, every leaf! The overhead view of the leaves of this Calathea Medallion will instantly strike you as boldly confident. The intricate patterns appear to be engraved and seem as though nature had used a paint-by-numbers kit. The undersides of the leaves are bathed in deep violet, and when the light filters through, the two sides simultaneously reveal added texture and color. Leaves move during the day towards light. This natural, daily movement is driven by an internal circadian rhythm.
- **Exposure/Soil:** Prefers bright, indirect light. It can tolerate some lower light conditions, but avoid direct sunlight, as it can scorch the leaves. Make sure you don't have chlorine in your water, so using filtered water is best to avoid brown leaf tips. Prefers high humidity and high temperatures as well. You can increase humidity by misting the leaves with water, using a humidifier, or placing a tray of water near the plant. Do not use leaf shine. Don't be too worried if you notice the leaves beginning to curl or the stems of your Calathea start drooping. These are signs of dehydration. It's important to pay attention to these indicators, but these hardy houseplants can bounce back within a day or so after receiving water.
- **Growth:** Can grow to 16-24" tall and wide.
- **Hardiness:** Zone 10 Houseplant, Annual
- **Foliage:** Leathery, oval blades with purple undersides, and the upper surface is dark pink with green edges. Rotate your Calathea to promote a full, balanced indoor plant.
- **Flower:** Not known for flowers
