

Mysty Red Calathea

This plant filters pollutants from the air while releasing oxygen. With this plant in your home, you breathe cleaner air.

This plant is considered non-toxic, therefore safe around children and pets.

Goeppertia (Calathea) roseopicta 'Mysty Red'

- **Use:** The Mysty Red Calathea is a showstopper that transforms any room into a living gallery. Its deep green leaves, brushed with strokes of pink and burgundy, offer a sophisticated touch of color that brightens up even the quietest corners of your home. Calathea are part of the Marantaceae family which are known for their ability to move their leaves depending on available light. This is known as nastic movement.
- **Exposure/Soil:** Prefers bright, indirect light. It can tolerate some lower light conditions, but avoid direct sunlight, as it can scorch the leaves. Make sure you don't have chlorine in your water, so using filtered water is best to avoid brown leaf tips. Calathea wants high humidity and high temperatures as well. Prefers high humidity levels. You can increase humidity by misting the leaves with water, using a humidifier, or placing a tray of water near the plant. Do not use leaf shine and filtered water is best. Don't be too worried if you notice the leaves beginning to curl or the stems of your Calathea Medallion drooping. These are signs of dehydration. It's important to pay attention to these indicators, but these hardy houseplants can bounce back within a day or so after receiving water. Do not allow to stand in water.
- **Growth:** Can grow to 30" tall and wide.
- **Hardiness:** Zone 10 Houseplant, Annual
- **Foliage:** Striking, intensely colored round foliage featuring a vibrant magenta or deep red-pink center framed by very dark green to black-purple margins, with rich burgundy-purple undersides. Rotate your calathea to promote a full, balanced indoor plant.
- **Flower:** Not known for flowers.
