

Splash Hoya

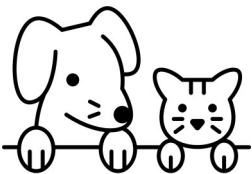

Hoya krohniana 'Splash'

- **Use:** A trailing, vining houseplant featuring petite, teardrop shaped leaves with splashed of white. Hoyas are an easy care plant for hanging baskets indoor or out. It is also great trained up a trellis or support pole. This evergreen tropical vine actively grows in the warm temperatures of late Spring to Fall. Makes a great addition to any home or office.
- **Exposure/Soil:** This plant will need a reasonably light room in order to actually grow, although it will still get by even if you pick a shadier spot, very dark places need to be avoided though. Indirect sunlight is acceptable too, so in reality you could position it almost anywhere in your home or office. With its succulent qualities it's quite adapt at storing water for longish periods of time between waterings. The soil should never be saturated or boggy as this will lead to rotting. Fertilize it once a month during the growing season (spring and summer) with a balanced, water-soluble fertilizer.
- **Growth:** Runners can grow as long as 2-3' and enjoy growing on other structures as they vine. Slower grower than many other hoyas.
- **Hardiness:** Zone 11-12, Annual, Houseplant; Keep indoors when temps below 50 degrees.
- **Foliage:** Small, silver-flecked, pointed leaves.
- **Flower:** Produces clusters of star-shaped flowers. The flowers are waxy in texture and are typically pink to lavender in color, with a sweet fragrance, especially in the evening. However, it's important to note that flowering might not occur unless the plant is in optimal conditions.

- Do Not let Hoya sit in excess water. As epiphytes, in the wild they would be growing on tree trunks or branches in the forest understory where they would get most of their water just from dew or moisture in the air.
- Considerably hardy & tolerant of a wide range of growing conditions, but for the best growth it is recommended to provide higher levels of humidity.
- Do Not remove the flower stalks after your it has finished flowering. Hoyas are able to rebloom again & again from the same stalk!

This plant filters pollutants from the air while releasing oxygen. With this plant in your home, you breathe cleaner air.

This plant is considered non-toxic, therefore safe around children and pets.
