

Cobra Monstera

This plant filters pollutants from the air while releasing oxygen. With this plant in your home, you breathe cleaner air.

Great as a specimen on patio or a houseplant! Great for cleaning the air in your home!

Monstera standleyana Albo-Variegata

- **Use:** This easy-care variegated houseplant that's super trendy and easy to grow. It shows off lovely variegated foliage -- the leaves are splashed and streaked with creamy white. Each leaf will be different -- some may have lots of variegation, and others will have little to no variegation. It's exciting to watch each new leaf unfurl!
- **Exposure/Soil:** Grows best in filtered bright light in its natural habitat in tropical Central America. Let the soil dry slightly before watering, and do not waterlog the soil or let it sit in a soggy state for long. Mist between watering times, and keep the moss-covered support moist to provide optimal moisture. Use slow release fertilizer. Prefers high humidity over 50%. We recommend you use filtered water on all your houseplants.
- **Growth:** A climbing houseplant, you can grow it on a moss pole or totem, or up a trellis. If you prefer, you can also let it trail from a hanging basket, or let it scramble horizontally along a well-lit mantle or tabletop. Over time, it can grow quite large -- more than 6 feet -- in good growing conditions.
- **Hardiness:** Zone 10-12 Houseplant, must bring inside in the winter or when temps go below 45 degrees.
- **Foliage:** Green and creamy-white variegated foliage. Unlike many Monstera, the leaves do not fenestrate (develop cuts or holes) as it matures.
- **Flower:** Not known for flowers.
