

# Goldfish Plant Basket

This plant filters pollutants from the air while releasing oxygen. With this plant in your home, you breathe cleaner air.

This plant is considered non-toxic, therefore safe around children and pets.

## *Nematanthus gregarius*

- **Use:** Grow your own goldfish, plant that is, in a sunny window indoors.
- **Exposure/Soil:** This plant will need a reasonably light room in order to actually grow, although it will still get by even if you pick a shadier spot, very dark places need to be avoided though. Sunlight is acceptable too, so in reality you could position it almost anywhere in your home or office. With its succulent qualities it's quite adapt at storing water for longish periods of time between waterings. The soil should never be saturated or boggy as this will lead to rotting. Fertilize it once a month during the growing season (spring and summer) with a balanced, water-soluble fertilizer.
- **Growth:** Runners can grow as long as 6' and enjoy growing on other structures as they vine.
- **Hardiness:** Zone 11-12, Annual, Houseplant;
- **Foliage:** It has thick, glossy, green leaves
- **Flower:** The flowers are stunning as the contrast in the flowering parts are really bold. Each sweet scented flower has a five-pointed star shape, and the cluster of flowers in itself looks like a star and a red center accent.
