

Peacock Peperomia

This plant filters pollutants from the air while releasing oxygen. With this plant in your home, you breathe cleaner air.

This plant is considered non-toxic, therefore safe around children and pets.

Peperomia albobittata 'Piccolo Banda'

- **Use:** The Peperomia Piccolo Banda is a leafy, fast-growing succulent that'll add some serious style to your home. It's super easy to care for, making it a great addition to any green gang.
- **Exposure/Soil:** Thrives in bright, indirect sunlight. Although most types of peperomia thrive in bright light, too much light fades the bright colors of the variegated foliage. Indoors, a window with an eastern exposure provides excellent light. Prefers humid conditions but is prone to stem rot in soggy soil. Water the plant deeply when the top of the soil feels slightly dry. Let the pot drain completely and never allow the plant to stand in water. Drainage is critical, so make sure the container has a drainage hole in the bottom.
- **Growth:** Grows to be approximately 6-12" inches tall and wide with a slow growth rate.
- **Hardiness:** Zone 10-12, Annual, Houseplant;
- **Foliage:** The leaves look like mini watermelons. They have striking pale silvery-green leaves, with dark green, sometimes purple veining.
- **Flower:** Like other Peperomias, produces unscented bloom spikes with many tiny flower blossoms along the spike. The male and female flowers have no petals and are not visible to the unaided eye.
