

Wick & Grow Pot

Wick & Grow® is a self-watering system for houseplants that means your plants will never be under- or overwatered. It's been scientifically developed and tested to deliver exactly how much your plant needs when it needs it—resulting in a happy, healthy, beautiful plant!

The Components

1. The decorative pot with a reservoir that holds all the water for the plant to drink.
2. The Waterwick® that connects the water to the soil. It snaps into one of the drainage holes at the bottom of the pot.
3. Your plant of choice. Because the plant drinks as much as it wants, when it wants, the Wick & Grow® system works for just about every type of plant, from thirsty varieties like Geo and Peace Lily to drought-tolerant species like Snake Plant and ZZ Plant.

The Wick & Grow® self-watering system is based on a specially designed blue-and-white Waterwick® (it looks like a string) that serves like a straw for your plant. As your plant roots drink water from the potting soil, the Waterwick® draws that same amount of moisture up from a water reservoir below the pot.

Did you know that we recycle empty pots and trays? Please bring them back! Save the Earth!
