

Frosty Blue Hardy Agave

Agave ovatifolia 'Frosty Blue'

- **Use:** A handsome smaller Agave. Solitary, symmetrical rosette has smooth, blue-green leaves with tiny spines. Each leaf tip bears a short red spine. This beautiful, yet tough and drought tolerant plant is an elegant choice for sunny, dry gardens and well-suited to containers. In summer when the plants are actively growing, they appreciate a bit of supplemental watering and half-strength fertilizer. They should be grown dry in winter. Agave is a slower grower, so it will not quickly overtake the space it is allotted in the landscape.
- **Exposure/Soil:** Full sun. Water every 10 days to weeks allowing soil to dry out in between waterings. Use slow release fertilizer for best results. Do not plant out in the open where rains can soak it during the winter months. DRAINAGE, DRAINAGE, DRAINAGE IS THE SECRET. So, plant in sand and gravel, in a raised bed or on a slope is best. NO CLAY SOILS.
- **Growth:** Grows 2-3' tall and 3-6' wide, larger over long periods of time.
- **Hardiness:** Zone 7b-10, Perennial or Houseplant
- **Foliage:** Evergreen; 1-1 1/2 inch wide blue-green leaves that have sharp spines we recommend tipping off for safety.
- **Flower:** Blooms only once every 10 years.

Looks lovely in rock gardens, near stacked stone, and in pots.

Did you know that we recycle empty pots and trays? Please bring them back! Save the Earth!
