

# Prairie Blaze™ Green Coneflower

Easy to grow wildflower! Coneflower is shown to best effect when grouped in beds and borders or massed in naturalized areas. But they're also great accent and container plants.

## *Echinacea purpurea* 'Prairie Blaze Green'

- **Use:** A member of the Prairie Blaze™ series, Green is a showy perennial wildflower that blooms heavily from mid-spring to late summer, often with sporadic blooms into fall. Early- and long-blooming, Prairie Blaze Green sets daisy-like flowers with gorgeous lime-green rays. Coneflowers are deer resistant and drought, heat, and humidity tolerant. Extremely cold hardy, they overwinter well.
- **Exposure/Soil:** Full- part sun. Moist, well-drained soil, but not soggy. Use slow release fertilizer two times a year. Water regularly, when top 3 in. of soil is dry.
- **Growth:** Moderate-growing to 14-16" in. tall and 6-8" wide.
- **Hardiness:** Zone 3-9; Perennial. The plant freely self-seeds if seed heads are not removed.
- **Foliage:** Deciduous. Long oval leaves.
- **Flower:** Borne on short, sturdy stems, the uniquely green colored flowers make excellent, long-lasting cuts for floral arrangements and bouquets. Left in the garden, the flowers attract bees and butterflies; and the dried end-of-season seed heads that follow provide sustenance for songbirds as well as interest for the winter garden, especially when dusted in freshly fallen snow. Deadheading is not required for continuous blooms.
