

# Frosty Club Moss

This plant filters pollutants from the air while releasing oxygen. With this plant in your home, you breathe cleaner air.

This plant is considered non-toxic, therefore safe around children and pets.

## *Selaginella kraussiana* 'Frosty'

- **Use:** One of the most vigorous growing Tropical Club Mosses, this frosty form adds a touch of brilliance to potted containers or terrarium design. The creeping stems create a dense mat, quickly covering the soil's surface. Grow as a miniature in a small pot or hanging basket. Remember to keep it evenly moist, and this moss will do well in low light. Its golden-frosted white leaves when used in a pot plant can brighten an interior room.
- **Exposure/Soil:** Partial shade– shade. Indirect light indoors. Water regularly, when top 3 in. of soil is dry. Needs to be kept constantly moist, but not sitting in water. If used as a houseplant we recommend a saucer with rocks underneath and fill water up to top of rocks to create a humid environment. **DO NOT PLANT IN FULL SUN!**
- **Growth:** Grows 6-8" high and outward growing continuously at a moderate pace.
- **Hardiness:** Zone 9-10; Houseplant/ Shade annual when temps are above 50
- **Foliage:** Features cream-colored variegation on its foliage, which shows a slightly silvery appearance.
- **Flower:** No flowers are produced, but this "fern ally" makes spores upon small leafy spikes.
