

Dwarf Pampas Grass

Drought tolerant and needs little water.

Cortaderia selloana 'Pumila'

- **Use:** This variety is a smaller, more cold hardy version of Pampas Grass. It thrives in hot, full sun exposures and is especially useful as a specimen along walls and in corners. Plant it in moderately fertile soil with good drainage. Leave standing over the winter before cutting it back hard in mid-spring. Pumila is sterile and won't re-seed itself.
- **Exposure/Soil:** Prefers full sun to part sun. Water regularly, when top 3 in. of soil is dry to start. Little water needed once established.
- **Growth:** Moderate grower 4-6' tall x 36" wide
- **Hardiness:** **Zone** 4-9 Perennial Grass
- **Foliage:** Deciduous. Leaves sharp. Cut back in the winter to 2' tall for best look.
- **Flower:** It is extremely showy with its large, fluffy white flower heads that are held on stout stems.
