

Honeymoon® California Sandy Shores Lenten Rose

Helleborus 'Honeymoon® Sandy Shores'

- **Use:** Hellebores are the harbingers of spring, blooming for six weeks or more beginning in late winter. They are often flowering during the Christian season of Lent, from which they get their common name, Lenten Rose. This is the perfect plant for naturalizing in moist, woodland areas where its extensive root system will spread as far as it is allowed. This hardy introduction from hybridizer Hans Hansen was selected for its profuse blossoms.
- **Exposure/Soil:** Part sun-shade. Prefers acidic, (most of our GA soils are acidic) moist, well-drained soil, but not soggy.
- **Growth:** Grows 18-24" tall and wide
- **Hardiness:** Zone 4-9; perennial
- **Foliage:** Evergreen, virtually problem free. Foliage is a handsome silvery-green.
- **Flower:** Bears 2½-3", single pale apricot flowers with a lovely rosy pink color on the backs opens a paler color.

Use in winter and holiday combination containers with evergreens or enjoy it in the landscape. A must have for every shade gardener!
