

# Ice N Roses Dark Picotee Lenten Rose

## *Helleborus x glandorffensis* 'Ice n Roses Dark Picotee'

**The unusual flower colour delights the eye from December into spring, especially if it is planted in containers and placed so that they can be enjoyed from inside the home. Planted out in the garden, it is a long-lived, low-care and robust perennial that grows more charming and beautiful every year.**

- **Use:** One of the easiest perennials to grow, Hellebores are indifferent to environmental stresses from heat and humidity to poor soil and even drought. They are poisonous, keeping diseases and pests at bay, and very hardy in almost any climate. Long-lived, they slowly spread into glorious colonies. And their ability to transform the late winter garden is unrivaled. Add Ice 'n Roses® Red to your shade border and woodland garden this season, and begin enjoying the difference that year-round performance can bring!
- **Exposure/Soil:** Part sun-shade. Prefers acidic, (most of our GA soils are acidic) moist, well-drained soil, but not soggy.
- **Growth:** Grows 18-20" tall in bloom and 18" tall -24" wide; multiplies well.
- **Hardiness:** Zone 5-9; perennial
- **Foliage:** Evergreen, virtually problem free. Foliage is a handsome silvery-green.
- **Flower:** Creamy-pink, darker pink-red-rimmed blooms – charming bi-coloured flowers have been only a rare appearance among Snow Roses up to now. Long bloom time of December to March.
