

# Frostkiss Cheryl's Shine Lenten Rose

## *Helleborus x iburgensis* 'Frostkiss Cheryl's Shine'

- **Use:** Another of the great hybrids between the *Helleborus x ballardiae* (niger x lividus) and the lenten rose, *Helleborus x hybridus*. The lovely green and silver-veined, evergreen, deer-resistant foliage is topped, starting for us in mid-February, with 15" tall stalks of out-facing pink flowers, lighter toward the center and each beautifully accented by a large central cluster of yellow stamens.
- **Exposure/Soil:** Part sun-shade. Moist, well-drained soil, but not soggy. Good drainage is a must.
- **Growth:** Grows 18" tall and 30" wide. Sterile type.
- **Hardiness:** Zone 6-9; Perennial
- **Foliage:** Evergreen, virtually problem free. Soft-green veined leaves create a unique marbled look on a compact form. Older leaves can be cut back in late August to showcase winter blossoms better.
- **Flower:** Bright pink flowers with peach undertones add a brilliant pop of color to the landscape from late winter to early spring.

**A must for color in the winter garden, but still heat tolerant in summer.**
