

Stella Supreme Daylily

Daylilies can survive many harsh conditions that other plants cannot including: polluted city environments, slopes, poor and dry soils, near pavement that is salted in winter, and under Black Walnut trees (not affected by juglone).

Hemerocallis 'Stella Supreme'

- **Use:** This daylily is similar in blooming behavior as the ever-popular 'Stella de Oro', but differs in terms of flower color and flower shape. 'Stella Supreme' has lemon yellow flowers, similar in color to 'Big Time Happy', but with a smaller sized flower. The triangular-shaped flowers have a strong citrus smell. Starts blooming in early summer and reblooms until frost.
- **Exposure/Soil:** Full– part sun (but must be 5-6 hours of afternoon sun) . Moist, well-drained soil, but not soggy. Use slow release fertilizer two times a year (low in Nitrogen or they will grow more foliage than flowers). Once established needs only occasional water.
- **Growth:** Fast-growing and when in bloom, this mid-size clumper reaches 14 inches tall and 18-24" wide.
- **Hardiness:** Zone 3-9; Perennial
- **Foliage:** Semi-evergreen. The mounding strap like foliage adds a textural element to the garden when not in bloom.
- **Flower:** Reblooming cultivar that produces an abundance of charming 3" soft lemon-yellow blossoms from early summer to frost. It has a strong citrusy aroma and attracts a variety of pollinators, including butterflies and hummingbirds. They have a great fragrance and this new cultivar has flowers that stay open more than 16 hours!
