Heucherella 'Hopscotch' PP28750

- **Use:** The search was on for a great performing orange Heucherella, and they've found it with 'Hopscotch'. 'Hopscotch' is a *H. villosa* hybrid which means that it is naturally more heat and humidity tolerant, including greater vigor than Heucherellas without such parentage. The foliage is evergreen in most climates. Because of their low, mounding habit, they are often used as edging along paths or in containers. Try cutting a few of the tall flower scapes for fresh bouquets. From the FUN AND GAMES® Collection
- **Exposure/Soil:** Part sun-shade. Best when planted under other trees, but not too deep a shade or poor flowering and leaf color. Moist, well-drained soil, but not soggy. Use slow release fertilizer two times a year. Water regularly, when top 3 in. of soil is dry.
- **Growth:** Fast growth to 6 " tall, 16" in bloom overall, by 12" wide.
- **Hardiness:** 5-8; Perennial
- **Foliage:** Semi-evergreen. Leaves emerge red with dark red centers early in spring, before lightening to bronze red. Each leaf is lobed, giving it a unique lacy texture in the garden. In the heat of summer, the leaves mellow to deep green.
- **Flower:** In late spring, cream, bottlebrush shaped flowers appear above the foliage.

Heucherella is a hybrid genus produced from a cross between Heuchera and Tiarella. From Heuchera they gain the many different foliage colors and textures, while Tiarella add deeper leaf lobes and serration, as well as their signature central leaf blotching. Heucherella are sterile hybrids, and so typically have longer bloom seasons than either of their parents.
