

Cobalt-n-Gold™ Hypericum

Hypericum kalmianum 'PIIHYP-I' PP25,318

**Super fast
groundcover
for erosion
control in diffi-
cult areas.**

- **Use:** Cobalt-n-Gold™ Hypericum is a North American native selection shrub that has fine blue-silver foliage blanketed with ¾-inch sunny yellow flowers in late spring and early summer. Maturing at two to three feet tall and four to five feet wide, this mounded shrub is an ideal mid-sized plant to use along foundations, in borders, or in low hedges.
- **Exposure/Soil:** Full-sun (with a little shade from hottest part of afternoon) although plants will adapt to partial shade. Too much irrigation or wet soils is not a good thing. A light trimming with the clippers in late winter (February) will encourage new growth in spring.
- **Growth:** Grows 2-3' tall and 4-5' wide.
- **Hardiness:** Zone 4-7 (8 will need a very protected spot with afternoon shade/might be better suited to NE GA mountains); Shrub
- **Foliage:** Evergreen; Emerges chartreuse-bronzed, but quickly turns to medium green then dark green, with fall color being a deep blue-green
- **Flowers:** Bright canary yellow flowers that contrast with the dark green foliage. Each flower lasts one to two weeks. It blooms mostly in June and July, and sporadically most of the summer.
