

# Snowsurfer Forte Evergreen Candytuft

**Use it to  
edge**

## *Iberis sempervirens* 'Snowfurer Forte'

- **Use:** Carefree and colorful, Snowsurfer™ take an old fashioned perennial and revitalizes it with more bloom, a longer bloom time and less disease issues. Tight, compact, spreading plants become covered with buds in early May. These buds open to a cloud of small, white flowers that cover the plant into June. Attracts bees and butterflies! Deer resistant.
- **Exposure/Soil:** Sun– part shade. Provide well-drained, moist soil, but not soggy. Use a slow release fertilizer. Superb in borders, beds, and open woodland gardens.
- **Growth:** Growing to about 6-12" tall and 18" wide, its relaxed mounding form is perfect for gently cascading over the border of a bed or tumbling out of a pot. Variety has improved vigor and branching.
- **Hardiness:** Zone 5-10, perennial
- **Foliage:** Herbaceous, evergreen perennial and a floriferous selection for borders, rock gardens or for use as a groundcover.
- Cutting grown.
- **Flower:** Large white-as-snow flower clusters cover this compact, trouble-free edger for a sunny site in spring.

**your driveway in  
part sun-sun conditions.  
Lovely drifts of white blossoms resemble drifts of snow.**
