

Super English Blue Lavender

Lavandula angustifolia 'Super Blue'

- **Use:** A compact and fragrant Lavender plant that tops out at 12", making it a perfect choice for edging walkways and setting into patio containers. This English Lavender is fairly tough, withstanding drought and overwintering reliably in all but the coldest zones.
- **Exposure/Soil:** Full sun– part sun. Drought tolerant once established. Needs at least 6 hours afternoon sun. **Soil must be sandy and have a pH of 7, so add lime. NO RED CLAY!** Keep water off the leaves, water under foliage. Good drainage, pH, and air circulation are key to success.
- **Growth:** Grows 10-12" tall , 10-12" wide.
- **Hardiness:** Zone 5-8; Perennial. Mulch heavily around the plant
- **Foliage:** Evergreen in warmer climates. Broad, gray-green-cream variegated leaves that boast a sweet fragrance
- **Flower:** Produces dark blue blooms that are tighter together, delivering more color and fewer airy gaps. Prune and hang upside down to dry if desired.

Excellent winter hardiness and heat and humidity tolerance. Prune lightly in early spring, no harder than 4 inches. Lavender MUST have good drainage in order to avoid root rot problems. Consider growing in a raised bed or rock garden.
