Jacob Cline Bee Balm/Wild Bergamot

We love to use them as cut flowers! Discovered by Georgia plantsman,

Jean Cline, near the Blue Ridge Parkway and named for his son.

Monarda didyma 'Jacob Cline'

- <u>Use</u>: A showy red-flowering native to bring the hummingbirds to your garden! Bees, butterflies and hummingbirds can't resist their sweet nectar and fragrance. Attract much needed pollinators and feed your soul with these beautiful, contained, carefree bee balms.
- **Exposure/Soil:** They prefer warm sun or part shade if warm spot in the garden. When they are growing, they do not like to dry out, but when they are dormant, they like to be dry. They can be grown great in containers as well, but containers should be left dry in the garage or under an eave for the winter. They can handle cold temperatures if they are dry.
- **Growth:** Moderate to large grower to 3-4' tall and 3' wide.
- *Hardiness:* Zone 3-9; Perennial Mulch around plant in the winter.
- **Foliage:** Deciduous. The toothed, aromatic, oblong, grayish-green leaves (to 4") may be used in teas and has a minty scent. It is reputed to have some resistance to powdery mildew.
- <u>Flower</u>: Fiery-red flowers looming from May to late fall, this longflowering Monarda is beautiful, especially when massed in drifts to attract butterflies, bees, and hummingbirds.
