

Yellow Picotee Primrose

**Winter-spring
blooming perennial!**

Primula vulgaris 'Oakleaf Yellow Picotee'

- **Use:** This is a standout primrose with oak-leaf-shaped foliage and bright yellow flowers with orangish-red edges. The flowers grace the landscape in early spring atop tall stems. This is an extremely hardy variety that will be a consistent performer in the garden. Nice for a shade garden with some dappled sun. We know spring is here when the primroses are blooming! These unusual plants were developed by Dr Margaret Webster, who has done a lot of research into the floral mutations of Primula.
- **Exposure/Soil:** Part sun-shade. Moist, well-drained soil. Keep water off the leaves and flowers for best results. Beware of slugs and snails.
- **Growth:** Grows 18" tall and 14" wide.
- **Hardiness:** Zone 4-8; Perennial
- **Foliage:** Deciduous; Unusual oak shaped foliage.
- **Flower:** Displays an upright clump of bright yellow flowers with orange-red edges in early spring. They come back every year!
