

Gray Sedum

**Drought
tolerant and so
easy to grow!
Great in a sunny
window with little
care or attention.**

Sedum griseum

- **Use:** A nice, bushy centerpiece for a succulent dish garden, or by itself as an addition to your indoor succulent collection. A silvery green with delicate foliage and a frosted appearance. The young leaves feature farina, a powdery wax. To complete the frosted look, it produces snow white flowers in late summer. Requires little water or maintenance. Can be overwintered in a sunny window or kept as a houseplant.
- **Exposure/Soil:** Needs to be planted in full sun in well-drained soil. It will tolerate most soil types and is drought resistant.
- **Growth:** Grows to 8" tall and can spread to form a colorful low-growing matt to 20" across. They grow long, sprawling stems and take well to pruning every couple years. Just re-stick trimmed stems into fresh soil to re-root.
- **Hardiness:** Zone 10+; Houseplant our outdoors when temps above 50 degrees.
- **Foliage:** Deciduous. The fine, silvery-grey needle-like leaves contrast well with other succulents.
- **Flower:** White, 5 petaled, star-like flowers in late winter.
