

Indian Pink

Spigelia marilandica

- **Use:** AKA Woodland Pinkroot. One of the most striking and beautiful of our native perennials, woodland pinkroot's summer flowers are brilliant red and tubular with canary yellow throats. A very hardy plant, though it is best planted by the end of July for reliable success in gardens and containers. A favorite of butterflies and hummingbirds, it is at home in the bright woodland or shaded border.
- **Exposure/Soil:** Shade. Moist, well-drained soil, but not soggy. Good drainage is a must. Take care to amend the soil with plenty of organic matter, such as well-aged leaf mold and compost. Plants will go dormant in summer.
- **Growth:** Grows 12-18" tall and 12-16" wide; multiplies well.
- **Hardiness:** Zone 6-9; Perennial
- **Foliage:** Deciduous; Consisting of loose clumps of unbranched leafy stems that are more or less erect. ... These leaves are 2-4" long and 1-2½" across; they are ovate-cordate, ovate, or lanceolate in shape and their margins are smooth (entire).
- **Flower:** Vivid red tubular flowers borne in terminal clusters open to expose a chartreuse yellow interior, reminiscent of a firecracker exploding. This perennial produces its primary display in early summer and flowers sporadically through the remainder of the growing season.

The bright flowers attract hummingbirds and brighten the woodland edge or perennial border.
