

Mammoth Series Pansy

Mammoth pansies are known for their extra large faces. This series maintains huge flower size under warm conditions with excellent overwintering and re-bloom in the spring.

Viola wittrockiana 'Mammoth Series'

- **Use:** Extra large flowered pansy with stronger plant vigor than Colossus and fast and easy pot fill, especially under warm and stressful growing conditions. Ideal for larger pots, where strong branching is needed to build the plant.
- **Exposure/Soil:** Plant in full sun. Must amend the soil if you have poor soil (like red clay). We recommend a peat based Soil. Require different fertilizer than most plants as they grow in the winter. Use slow release or water soluble fertilizer with Nitrate not Ammonium nitrogen form of fertilizer for best results from December to March.
- **Growth:** The plants are just about 5-6 inches high and 6-8 inches wide, so they cover themselves with flowers.
- **Hardiness:** Zone 7-10; Perennial, but they don't look good in hot summers so often treated as an annual.
- **Tips:** Give pansies a good drink of water before an expected freeze. The additional moisture in the plants, which means less stress, helps the pansies weather the freeze.
- **Foliage:** Semi-Evergreen; Green foliage.
- **Flower:** Extra large 3"+ flower heads with cheerful faces. Petals like tissue paper dipped in dye remind us of the Victorian era. Extra early and uniform flowering under the short days of early spring and late fall. Offers the widest range of perfectly matched core and novelty colors and mixes in its class, with cheerful, upright facing flowers.
