

Little Missy Boxwood

Can be used to help build structure, create

style and make a focal point in the garden.

Buxus hybrid 'Little Missy'

- **Use:** In a recent USDA analysis, Buxus 'Little Missy' from Star Roses and Plants was ranked in the top 2% of varieties resistant to boxwood blight. It has smaller leaves than Buxus microphylla, and it maintains a very dense habit and glossy, lustrous foliage all year round. Tight internodes, distinct winter color, and strong disease and insect resistance make this boxwood very unique. Its growth rate is around 2-3" per flush, and it works well to create structure and style in the garden.
- **Exposure/Soil:** Sun to part sun. Only requires well-drained soil and prefers shading and wind protection in winter if grown on an exposed site. Tolerates some drought and will grow in dry soil but prefers well-drained, loamy, sandy or clay soils with a pH of acidic to slightly alkaline (6.8-7.7)
- **Growth:** Compact growth to 2.5' tall and 3.5' wide.
- **Hardiness:** Zone 5-9; Shrub
- **Foliage:** Evergreen; Lustrous green leaves. It does well with trimming, so it can be used to make knot gardens and short formal hedges.
- **Flower:** Spring flowers are inconspicuous.
