

Green Mountain Boxwood

Can easily be shaped into a formal hedge and is sometimes seen pruned to a

decorative spiral-shaped topiary. It is common in English gardens and winter gardens and is good for pollinator gardens as it attracts bees.

Buxus x 'Green Mountain'

- **Use:** A vigorous evergreen shrub with bright green foliage that retains good color throughout winter. The upright, naturally cone-shaped habit makes it an excellent candidate for topiary forms, and a striking container or formal garden accent. Use in mass plantings to create either a free-form or a sculpted hedge.
- **Exposure/Soil:** Prefers full sun to part shade. Keep surface of soil moist, but not soggy. Limit cultivation around the shallow roots as it can damage the plant. Protect the roots with a layer of mulch. Thinning plants annually through pruning will assist air circulation. Prune after the last frost.
- **Growth:** It is noted for its dense, upright, pyramidal shape that tends to fill out right to the ground. It is a slow grower and will mature to 2 to 3 feet wide and 4 to 5 feet high.
- **Hardiness:** Zone 4-9; Shrub
- **Foliage:** Evergreen; Densely branched, the small, green foliage is abundant and adds a distinctive note to the landscape, retaining its color particularly well in winter.
- **Flower:** Spring flowers are inconspicuous.
