

# J Stewart Howard's Variegated Camellia

## *Camellia japonica* 'J. Stewart Howard Variegata'

- **Use:** Every southern garden must include a winter showy camellia. An ideal beginner's plant, the easy-care camellia is covered year-round with broad and glossy toothed leaves. Camellias make beautiful screens in the shade garden to add winter beauty to your garden and keep out prying neighbors.
- **Exposure/Soil:** Prefers sheltered site, sunny or shade, and any well drained neutral/acid soil. Camellias grow best in partial shade -- they do not like early morning or late afternoon sun. Red blooming cultivars are more sun tolerant than white or pink flowering cultivars. In the winter camellias need protection from direct sun and drying winds. A planting site under tall pine trees or on the north or west side of a building is ideal. Plants grown in full sun may develop leaf scorch. Its best to not fertilize the first growing season and over fertilization causes plant to be less compact.
- **Growth:** Moderate growing to 6 to 10 ft. tall and 6-8' wide.
- **Hardiness:** Zone 6-9, shrub
- **Foliage:** Evergreen, glossy leaves.
- **Flower:** Large flowers are deep pink blotched with white. Originated in USA by E. Ray Bond, Dallas, Texas. Average flower size, 11 cm across x 3.2 cm deep with 14 petals and sharply contrasting and upright stamens.

**No exact photo available as very rare, but above is a similar one. Add interest to your winter garden with Camellias. A collector's item for sure!**
