Albino Camellia

A fine addition to fall gardens, camellia gardens, white theme gardens, cottage gardens, cut flower gardens, and shade and woodland gardens this fall beauty is a gorgeous addition to light up partially shaded woodland or flowering shrub borders.

Camellia sasanqua 'Albino'

- **Use:** As a shrub it is ideal for use as a specimen, in groupings or as a hedge or background plant in landscape borders and is especially nice as a corner plant or espalier (trained to grow flat against a wall) in home foundation plantings. As the shrub grows lower branches can be removed to form a highly attractive small tree that serves well as an a colorful focal point specimen in landscape borders and home foundation plantings. We love floating flowers in a shallow bowl.
- **Exposure/Soil:** Performs best in morning sun and afternoon shade, with at least 6 hours of direct sunlight daily. Can tolerate full sun and will have best blooming, but may see foliage burn in August if too hot in summer. While they can survive in full shade, low light leads to fewer flowers and less full growth. Thrive in moist, well-drained, nutrient-rich, and chalky to normal/loamy soil.
- **Growth:** Grows quickly 8-10' tall and wide. Space 5-6' for solid hedges; 12'+ for space between plants. Prune only within 2 months of flowering.
- **Hardiness**: Zone 7a-10b; Shrub
- **Foliage**: Evergreen. Dark green, glossy, leathery, foliage.
- **Flower:** Pure white, formal double flower featuring approximately 38 tight, neatly overlapping petals that stay formal and drop in a single piece. Numerous small flwoers bloom later in the season than other C. sasanqua.
